About Us

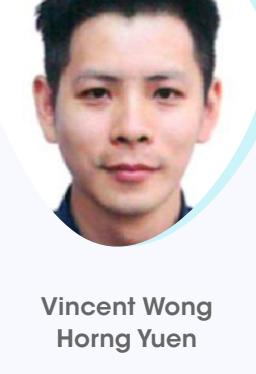

Xendity is a software technology start-up aims to accelerate and strengthen identity verification processes by using e-KYC technology

That requires facial recognition in which, making manual document authentication a thing of the past. Xendity provides you the best digital customer experience for identification and digital signing which capable of operating with images obtained from a scanner, a mobile device camera as well as web camera (in real time).

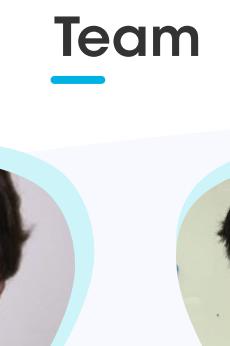

With Xendity, personal identification and contract conclusion have finally reached the digital world. We offer banks, companies and even institutions innovative a secure solution with legally-binding contract conclusion between customers and contract partners. We aspire to build products which too, can be upgraded to meet your necessities in the framework of solving specific complications of data recognition in an e-document and image processing.
